DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 8, 10, 11, 18, 19 and 21 are rejected, as understood, under 35 U.S.C. 102(b) as being anticipated by Yuan et al. (U.S. Patent No. 5,681,312).

Yuan et al. disclose a bone fixation device comprising a first member (14) interconnected to a second member (12) by an elongate rod (10), and an adjustor member that transition between a first and second distance. The first distance is less than the second distance and the range of motion is linear and curved by looking at the underside of the device. Also disclosed is the first member includes a modular coupler (10) that can mate with a second bone fixation.

Claims 1-8 and 10-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Kuntz (U.S. Patent No. 6,663,631).

Kuntz discloses a bone fixation device comprising a first member (20) interconnected to a second member (18) and an adjustor member (16) that transitions between a first and second distance. The first distance is less than the second distance and the range of motion is linear. The first member includes a distraction screw coupler that permits the first member to be coupled to a distraction screw while the first member is connected to the first vertebra. The screw coupler comprises a borehole sized to receive there through a distraction screw (32) while the borehole can mate with a portion of the distraction screw. Also disclosed is the first member includes a modular coupler (10) that can made with a second bone fixation. The device comprise a borehole extending through the first member that is configured to mate with at least a portion of the second bone fixation device. This borehole is also configured to receive a distraction screw such that the second member or first vertebra can be coupled to a distraction screw while the second member is connected to the second vertebra. This device also has the ability to be modularly attached to a third bone fixation device.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892 for art cited of interest.
